

FINAL REPORT

CIS580 SP2017 Project2

ABSTRACT

This report contains the final output of the 3D points cloud with camera poses, as well as the details of the effects of several functions, such as RANSAC, Nonlinear Triangulation, Nonlinear PNP and Bundle Adjustment. Also, 2D re-projections are shown with quantitative errors.

Presented by: Hantian Liu

Results

Final 3D Point Cloud

It could be easily observed that in the right, the L-shaped pattern shows the corner of the building in the pictures. Also, the round pattern in the left refers to the tree beside the building.

Following are multiple views of the final 3D point cloud.

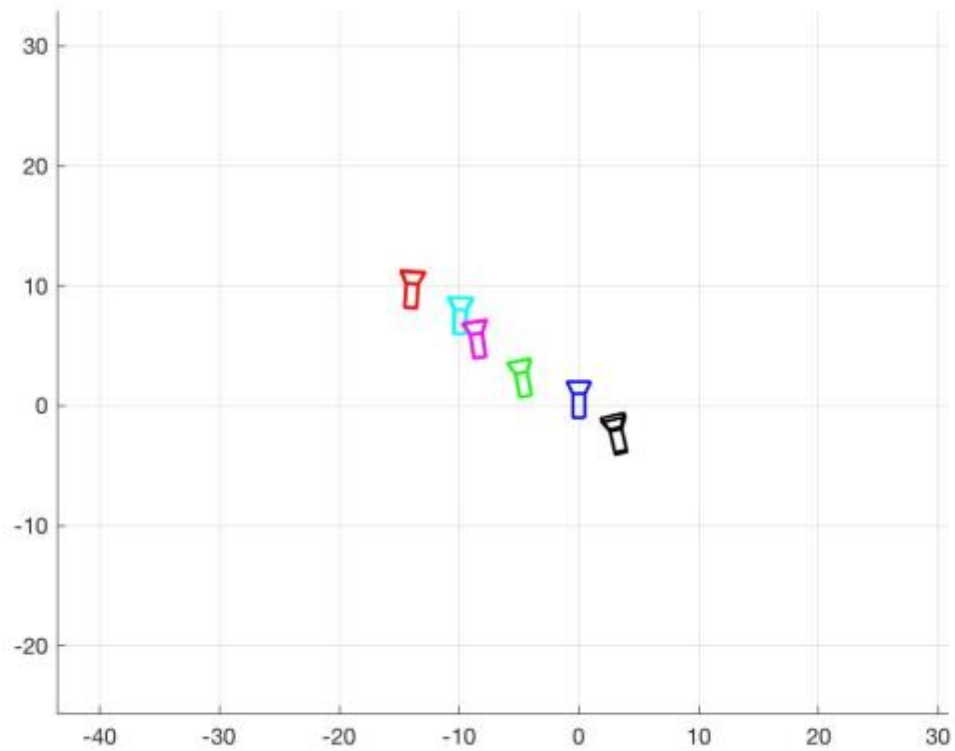

Total Points Number

Xfinal			
5199x3 double			
	1	2	3
1	1.0159	1.3348	7.7833
2	1.9720	-4.0838	9.3762
3	-2.4727	1.9702	10.6246
4	-2.3850	-1.8575	11.0901
5	-12.3454	-6.6337	21.8213
6	-5.5417	2.2791	13.5653
7	12.0016	3.8543	18.1663

Final Camera Poses

6 0.6892	6 0.8982		
7 0.7092	7 0.9159		
	8 0.9180		
	9 0.9294		
	10 0.9325		

ratio	ratio
9x1 double	9x1 double
1	1
1 0.4683	1 0.4683
2 0.5486	2 0.5486
3 0.7484	3 0.7484
4 0.8150	4 0.8150
5 0.8150	5 0.8150
6 0.8182	6 0.8182
7 0.8689	7 0.8689
8 0.8901	8 0.8901
9 0.9239	9 0.9239

With the final ratio above, I save both the original matching from the txt file and the inliers after RANSAC. Over half of them are reserved for the further process.

frame × frame.matching × frame.inliers ×						
frame.matching						
	1	2	3	4	5	
1	1426x4 double	□	□	□	□	
2	608x4 double	1820x4 double	□	□	□

Effects of Nonlinear Triangulation

In 3D

Before:

After:

It is obviously shown in the two figures above, that after nonlinear triangulation, the positions of 3D points become denser. Thus the point cloud resembles the shape of the corner of the building more and we could obtain a more regular pattern.

In 2D

The re-projection error is largely reduced after nonlinear triangulation, for both cameras, as quantitatively shown below.

2D Reprojections of All 3D Points

With the recorded trajectory of all 3D points in the 3D points cloud, their re-projections to each image are obtained as follows.

Camera#2 Average Reprojection Error:0.45705

Camera#3 Average Reprojection Error:0.79548

Camera#4 Average Reprojection Error:1.4308

Camera#5 Average Reprojection Error:5.4861
